MEMORANDUM FOR: Chief, Exploratory Branch, P&DS

SUBJECT: Attachment for connecting Polaroid Microscope
Camera to a Macrocamera Configuration

1. The photointerpreter has need of a macro-photographic device for recording discrete image areas. This record usually accompanies his request to Reproduction for enlarged prints. Since a photograph "Says more than a thousand words" it will convey to Reproduction the actual point of interest, therefore, assuring his receiving just what he wants on the initial request.

2. Utilizing an available inhouse camera and objective, a prototype model can be developed and evaluated.

3. It is hereby requested that this task be developed by EDL Branch.

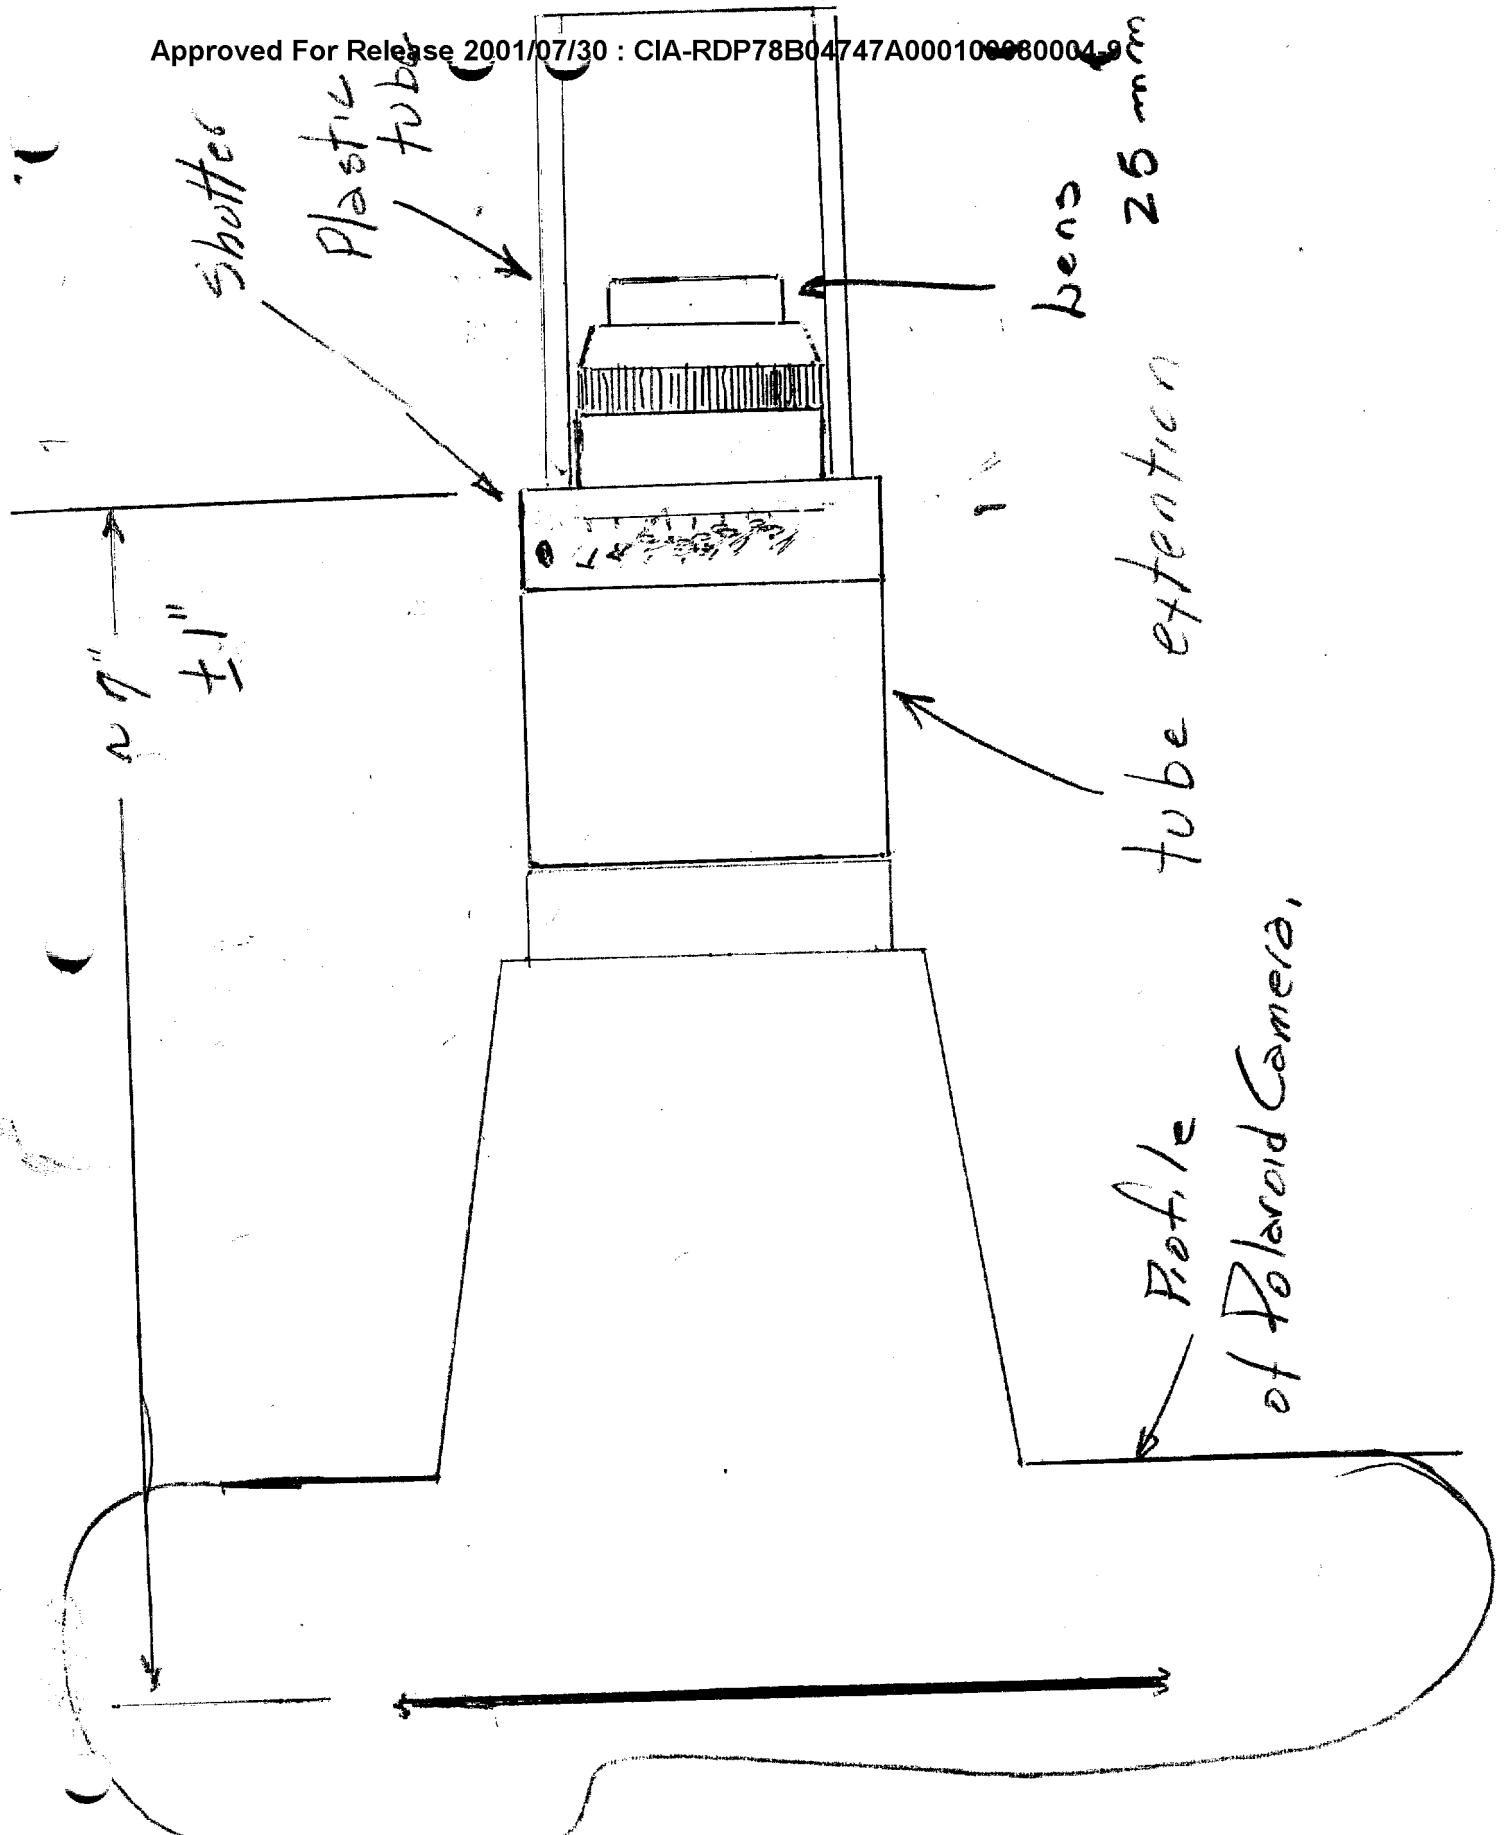

4. A crude experiment was conducted and as a result the attached sketch was evolved. The green outline is suggested as a general approach. The given dimensions are not rigid. The requirement is to achieve an image magnification between 5x & 10x. I will work closely and voluntarily with the member of EDL Branch assigned to this project.
